

## PROCESSING OF THERMOSETS

For our production of parts in thermosetting materials (PF, MF, UF and UP) we have 9 thermoset injection moulding machines made by Krauss-Maffei, Arburg and Battenfeld with a clamping force that ranges from 1300 kN to 3500 kN.

We are particularly interested in spruesless injection moulding of BMC, a process we are actively developing for thermosetting materials.

At the final stage of our thermoset parts production, our qualified technicians and 3 state-of-the-art deburring machines ensure a perfect finish.
